PRODUCT INFORMATION

Hydrolyzed Fish Collagen (HFC) is manufactured from the principal protein found in the skins and scales of wild-caught, cold-water whitefish (cod, haddock, and pollock). We do not use any farm-raised fish raised in aquaculture ponds on formula or feed.

Our premium collagen has been tested to contain multiple types, such as **Types I, II, III, and IV** which contribute to over 90% of the collagen found in the human body. The end product has many benefits for health.

Hydrolyzed Fish Collagen (HFC) is produced at our ISO9001:2015 certified facility in Nova Scotia, Canada to meet stringent requirements of United States, European, and Japanese Pharmacopoeia. The facility only produces marine products which limits the risk for BSE/TSE transmission.

Our material does not use any genetically modified products and is produced to meet "Organic Compliant" standards.

Hydrolyzed Fish Collagen has high protein content, good water solubility, and favorable sensory to be used in nutraceutical, pharmaceutical, cosmetic, and food applications.

APPLICATIONS

Beverages & Wine

Nutritional Shots

Dressings

Ready-to-Mix Powder

Protein Bars

Snacks

Meat

Topical & Cosmetics

Hydrolyzed Fish Collagen

WHY CONSUMERS LIKE COLLAGEN

Cold-Water, Wild-Caught We use only the finest raw materials. Unlike farm-raised fish, wild-caught fish have no possibility of being exposed to antibiotics or hormones.

No Aftertaste It's made from fish. But it doesn't taste like fish.

Pure Collagen No additives, preservatives or sulfites are used.

More of What You Need Compared to other fish-based collagen, Hydrolyzed Fish Collagen has higher concentrations of essential amino acids, including threonine, histidine, arginine and methionine, as well as glycine and serine.

Quality Control Our facility is dedicated solely to marine collagen, so we can keep a tight control on quality, and regularly test our products for purity and safety.

Hypo-Allergenic Our marine collagen is sourced from fish, but during our extraction process, almost all allergens are removed from the collagen.

BENEFITS OF COLLAGEN

Helps Improve

- Joint health and function
- Cardiovascular health
- Protein enrichment
- Skin Hydration
- Skin Elasticity
- Skin Health
- Bone strength
- Mobility

Helps Decrease

- Joint discomfort
- Joint inflammation
- Muscle atrophy
- Weight
- Bone mineral
- Recovery time
- Dry skin

Kenney & Ross, a subsidiary of Ajinomoto, was established in 1945 in Port Saxon, on Nova Scotia's South Shore. We manufacture high-quality gelatin and collagen products made from wild caught fish species, which support healthy joints, bones, muscles and skin. We're dedicated to producing natural, pure products, and continue to advance quality and purity to create the best collagen products on the market today.
